Ocean Economy Satellite Account Pipeline

Seven-step OESA compilation process — from scope definition to validated output

◎ SETUP PHASE | ★ CORE ESTIMATION | ✓ COMPILATION PHASE

1 DEFINE SCOPE

Geographic: EEZ, coastal zones
Economic: 3 pillars — on-water, coastal-dependent, for-ocean-use

2 CLASSIFY ACTIVITIES

Map national industries (**ISIC/SIC**) to 6 ocean economy groups

3 SELECT FRAMEWORK

Anchor to **Supply-Use Tables** (SUT) as the structural backbone

4 ESTIMATE PARTIALS

Ocean share of mixed industries: **1.0** for fishing/shipping; **0.1–0.5** for tourism/construction

5 COMPILE INDICATORS

Ocean Output = National Output × Partial
GVA = Output − IC

6 DATA INTEGRATION

Reconcile to SUT, check **consistency**, eliminate double counting

7 VALIDATE

Compare to **benchmarks**, document all assumptions and data gaps

▼ Output: OESA Summary Table — GVA by Ocean Sector

Living Resources	Marine Minerals ◆ GVA	Marine Construction	Ship & Boat Building	Marine Transport ◆ GVA	Coastal Tourism ◆ GVA	Total Ocean Economy

◆ GVA ◆ GVA ◆ GVA ★ Total GVA
